

Vacuum
on

Use with a
backpack
vacuum

Vacuum
off

Or as a
cordless
sweeper

THERE'S SO MUCH MORE!

ACTIV8 is a revolutionary new power head that can attach to any backpack, canister or ducted vacuum. With dual brushes, a 360 degree range of motion and extended handles, **ACTIV8** doubles your vacuuming speed and encourages good posture at the same time. But that's not all!

ACTIV8 is also designed as a carpet and floor sweeper when not connected to a vacuum. You can sweep the floor just as fast as you can vacuum and without the necessity for filters or bags. **ACTIV8** will sweep your cares away! When **ACTIV8** is full, simply flip open the two red clips and the dust tray drops to the floor. **ACTIV8** sweeping is perfect when your vacuum cleaner dies or you have a smaller area to work with. **ACTIV8** will clean your carpets better than a regular vacuum!

There is no other power head like **ACTIV8**!

WHY ACTIV8?

Built tough for commercial cleaning

Dramatically increases productivity

Rechargeable battery with up to 3hr run time

Full 360 degree range of motion

Only **ACTIV8** offers side to side vacuuming

Protects cleaners from back strain & fatigue

Save time & money. Be more competitive!

Reduces energy consumption & protects the environment

Built in sweeper function

Easy to clean & maintain

Suitable to vacuum or sweep stairs

Comes complete with special rods and cuff

Improves work space mapping

Have the latest technology working for you

WHAT'S ALL THE TALK ABOUT?

activ8

REVOLUTIONARY VACUUMING
TECHNOLOGY

Improve posture

Saving you time and money

Standard head

AMAZING BENEFITS

ACTIV8 allows the operator to vacuum in any direction while standing perfectly upright. This promotes good posture and prevents back strains. The hovercraft effect of **ACTIV8**'s design also reduces fatigue. No more vacuum heads stuck to the carpet, or wasting time on a piece of lint. With **ACTIV8**'s long reach there's no more bending down to vacuum under furniture. No more sweat!

ACTIV8 also delivers an amazing boost in productivity! The efficiency of the figure 8 motion coupled with the deep cleaning of dual brushes at over 4000rpm doubles your productivity!

As vacuuming is the most energy demanding process in cleaning, any reduction in vacuuming time saves on energy which means less carbon emissions and is better for the environment!

It just makes sense to have an **ACTIV8** for every cleaner!

WHAT'S THE STORY?

From the beginning, we were determined that **ACTIV8** would be engineered to the highest standards and utilize the best technology. The most common theme was the idea of "balance"

It was first necessary to balance the power requirement with **ACTIV8**'s weight. The motor had to be large enough to provide great torque but efficient enough to run on battery and be lightweight. After many tests, we settled on a specially designed brushless motor which provides plenty of torque, efficiency and a long operational life.

The battery had to be large enough to last at least two hours, but not too large, making **ACTIV8** too heavy. The result was a battery life of up to 3 hours.

All of **ACTIV8**'s components needed to be balanced in their placement to keep **ACTIV8** from leaning to one side. **ACTIV8** also had to balance itself on any floor without flipping over or getting jammed. With a combination of the two counter-rotating brushes, four track pads and two roller balls, **ACTIV8** glides effortlessly over carpets and hard floors and delivers an exceptional clean.

The gearbox was specially designed in order to be long lasting, quiet and efficient. It incorporates state of the art helical gears and is housed in a hermetically sealed box to protect from dust and corrosion.

We designed the brushes to be easily removed, cleaned, interchangeable and lightweight.

The dust tray was designed to be simple, easily detached and symmetrical, in order for it to be quickly utilised.

The power button had to be strong enough to withstand the pressure of a person's foot but sophisticated enough to provide a clear picture of **ACTIV8**'s functional state.

The circuit board which is **ACTIV8**'s brain contains a sophisticated chip which controls power, charging and brush speed while feeding back important information to the user.

We even decided to include two lightweight aluminium rods which adjust to the optimum height and a special cuff to replace your bent end which was no longer necessary!

The combination of these technologies has resulted in **ACTIV8**, the greatest leap forward in vacuuming technology for many years. We look forward to hearing about how **ACTIV8** will benefit you!

SMART FEATURES

ACTIV8 is packed with smart and innovative features that give you the edge in smart cleaning!

The **ACTIV8** smart power button provides perfect control and feedback at your feet! It tells you when your **ACTIV8** is on, when the battery is low, when it's being charged and when the battery is full. It even indicates when something has been caught in the rollers and needs to be removed! With a tap of the smart power button, you can start, stop and switch from high to low speed and back again!

ACTIV8 has specially serrated long edges that promote airflow. These increase efficiency and deliver great edge to edge cleaning. **ACTIV8** even increases airflow to your vacuum, especially handy for battery back packs!

ACTIV8 has an amazing central swivel joint made from super tough glass filled nylon. It provides a full 360 degree range of motion.
